No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                         US-10-797-157-2

Newly isolated or recombinant polynucleotide encoding mammalian cytokine interleukin-B30 (IL-B30), including fragments - useful for regulating activation, development, differentiation and function of various cell types, and for diagnosing and treating conditions associated with IL-B30.

Claim 2; Page 8-9; 83pp; English.

This represents a human cytokine interleukin-B30 (IL-B30) polypeptide. Host cells containing a vector comprising the IL-B30 nucleic acid are used for the recombinant production of the protein. The polynucleotides

```
receptor subunits useful in the treatment inflammatory disorders

 are useful for diagnosis of IL-B30 mediated conditions, and forensic science (e.g. to distinguish rodent from human, or as a marker to distinguish between different cells exhibiting differential expression or modification patterns). The IL-B30 (including fragments), together with antibodies that bind to IL-B30 are useful for teaching purposes. They are also used for treating conditions associated with abnormal physiology or development, including inflammatory conditions. The polypeptide cytokine should mediate cytokine synchesis and proliferation in cells. IL-B30 is useful for drug screening to identify compounds having binding affinity

Subunit I (DERSI) protein and DNAK Soluble receptor subunit I (DERSI) protein and DNAK Soluble receptor subunit I (DERSI) protein, which together encode a new mammalian cytokine recaptor (R), or DERSI and interleukin B30 (IL-B30) proteins, or DERSI and interleukin B30 (IL-B30) proteins, or DERSI and interleukin B30 (IL-B30) proteins, or screening for ligands (I.e. agonists/antagonists) from a library of compounds, which are useful for modulating the physiology or development of a cell or tissue culture e.g. inflammatory responses, innate immunity and/or morphogenic development. (R), antibodies and ligands are useful for treatment of conditions, especially immunological disorders, associated with conditions exhibiting abnormal expression of (R). (R) is useful as a phosphate labeling enzyme to label substrates, and the subunits DERSI and DERSI are useful as immunogens for generating (R) are useful for identifying related DNAs and mRNAs, and wariants from the are useful for identifying related DNAs and man variants from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                This sequence represents human interleukin-B30 (IL-B30). IL-B30 is a novel cytokine, exhibiting significant homology to IL-6 and GCSF (granulocyte colony stimulating factor). Cytokines play a critical role in signalling between immune or other cells during an immune response. The precise role if IL-B30 is not yet known - it is likely to have either a stimulatory or an inhibitory effect on haematopoietic cells such as T-cells, B-cells, natural killer (NK) cells and macrophages. Alternatively, it may affect vascular physiology or development, or have neuronal effects. IL-B30, its fragments, IL-B30 nucleotides, agonists and antagonists are useful in the diagnosis and treatment of disorders associated with abnormal expression or activity of IL-B30 e.g., inflammatory or autoimmune disorders. Nucleotides encoding IL-B30 are useful for recombinant expression of IL-B30 in a host cell, and as a source of probes and primers. The IL-B30 probes and primers can be used: to detect levels of IL-B30 expression in samples from patients suspected of having an inflammatory or autoimmune disorder. IL-B30 nucleotides may also be used to identify homologous genes in other species. IL-B30 protein or its fragments are useful as antigens for raising antibodies to various linear and conformational epitopes. Such antibodies may be used to detect levels of IL-B30 protein in a sample
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

This sequence shows human interleukin-B30. Fragments of this protein may be used in the composition of the invention. The composition comprises a substantially pure polypeptide comprising a number of distinct segments of at least 7 contiguous amino acids from IL-12 p40 and/or IL-B30, and a substantially pure polypeptide comprising a segment of at least 11 contiguous amino acids from IL-12 p40 and/or IL-B30. The composition is useful for modulating physiology or development of a cell or tissue in a host organism, resulting in an increased or decreased production of interferon-gamma (IFNgamma), an enhanced Thi response such as anti-tumour effect, and amelioration of an autoimmune condition or a chronic configuration of memory T-cells. An agonist is useful inducing the proliferation of memory T-cells. An agonist is useful for modulating he trafficking or activation of a leukocyte in an animal experiencing science or symptoms of autoimmunty, leukocyte in an animal experiencing science or symptoms of autoimmunty.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention discloses an isolated antigenic mature polypeptide that is a mammalian cytokine designated interleukin-B30 (IL-B30). The IL-B30 polypeptide is useful for diagnosing or treating (e.g. protein therapy) conditions associated with abnormal physiology or development (e.g. inflammatory conditions or autoimmune disorders), or in regulating the activation, development, differentiation and function of haematopoietic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a binding compound comprising an antibody binding sit which specifically binds to residues 1-168 (mature human interleukin-B30, IL-B30). Also included is a method of making the binding composition, comprising administering to an animal: (a) a substantially pure and isolated polypeptide comprising residues 1-168 of mature human IL-B30, (b) a substantially pure and isolated polypeptide comprising residues 1-168 of mature human isolated polypeptide comprising mature IL-B30. The animal produces the binding compound. The binding compound may be administered to treat disorders associated with haemacopoietic cells, e.g., lymphoid cells, which affect immunological responses, e.g., inflammation and/or development, or neuronal effects. The present sequence represents full-length human IL-B30

cells or lymphoid cells. The IL-B30 polypeptide is also useful as an immunogen for producing antisera or antibodies specific for binding. The sequence presented is the human IL-B30 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; interleukin B30; IL-B30; IL-12 p40; tumour necrosis factor alpha; IRN-alpha; interferon alpha; chronic inflammatory condition; memory T-cell; tumour, anti-viral; vaccine; allergic responses; autoimmune disease; multiple sclerosis; rheumatoid arthritis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Composition comprising fragments from interleukin (IL)-12 p40 and IL-B30 polypeptides is useful to enhance anti-viral, anti-tumor and vaccine effects and to antagonize allergic responses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a composition comprising polypeptide fragments from interleukin (IL)-12 p40 and IL-B30 is new. The fragments comprise 7 or 11 contiguous amino acids. Also included are an isolated or recombinant nucleic acid (N1) encoding the polypeptides of the novel

Composition, a cell comparising recombinant NI, a nuclear acid which composition, a cell comparising period of combined with a tumour necrosis factor (TNF) alpha antagonist, in IL-12 antagonist, IL-10 or steroids), a children composition of IL-12 p40/IL-B30 (combined with a tumour necrosis binding compound comprising an antigen binding site from an antibody which specifically binds to the novel composition, producing an antigen binding site from an antibody or development of antigen: antibody complex, modulating physiology or development of conficient of IPN-alpha, modulating physiology or development of conficient of IPN-alpha, modulating physiology or development of conficients of IPN-alpha, modulating physiology or development of conficients of IPN-alpha, modulating physiology or development of comprising conficients and anti-tumour, adjuvant, anti-viral or antagonised conficients of an anti-tumour, adjuvant, anti-viral or antagonised condition of an autoimmune condition or a chronic inflammatory response condition, increasing secretion of a primate IL-B30 (comprising expressing IL-B30 with IL-I2 p40 with IL-B30, screening for a receptor which binds the novel composition, modulating the inflammatory response comprising expressing IL-B30 or its agonist. The invention is useful in administering IL-B30 or its agonist. The invention is useful in antimal and inducing the proliferation of memory 7-cells by administering IL-B30 or its agonist. The invention is useful in antimal and caeching. They are useful to treat autoimmune diseases such as multiple sclerosis or particularly the complex is useful to enhance anti-tumour, anti-viral and caeching the proliferation and caeching including inflammatory conditions. Particularly the complex is useful to enhance anti-tumour, anti-viral and caeching the complex associated with abnormal physiology including inflammatory conditions. Particularly the complex is useful to enhance such as multiple sclerosis or inflammatory bowel disease. The present sequence represents human I

                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                             healing. The method comprises administering to a subject an agonist or an agonist or an agonist of intergleukin (IL)-23. The invention further comprises; an agonist of IL-23 derived from the binding site of an antibody that specifically binds to an IL-23 receptor; and a kit comprising the agonist and a compartment or instructions for use or disposal. The interleukin-23 agents have vulnerary activity. The method is useful for treating or improving wound healing. This sequence represents a cytokine human interleukin-19 protein used in the wound healing method of the invention.
                                                                                                                                                           Treating inflammatory skin disorders or improving wound healing comprises administering to a subject an agonist or antagonist of Interleukin-23.

This sequence represents human interleukin 23 subunit p19 (IL-21p19). The method of the invention for modulating tumour growth comprises contacting a tumour cell with an agonist or antagonist of IL-23. The agonist or artagonist is a binding composition which specifically binds the IL-23 opinist or antagonist may be used for diagnosition The identified agonist or the IL-23 receptor (IL-21R) protein. The identified subject suffering from a cancer or tumour. The binding or treating a subject suffering from a cancer or tumour. The binding or modular region of IL-21R, a small molecule, an antisense nucleic acid or small interference RNA (siRNA), or a detectable label. The binding composition comprises a polyclonal antibody, a monoclonal antibody, a humanized antibody or its fragment, a Pab, Pv, Fab') 2 fragment, or a peptide mimetic of an antibody. The tumour cell is a colon, ovarian or breast cancer cell, or melanoma cell. In the treatment method, the antagonist of IL-23 inhibits growth of cancer or tumour, cachexia, anorexia or angiogenesis. The cancer or tumour is of the gastrointestinal tract, respiratory tract, teproductive system or endocrine system. In diagnosing cancer or tumour, the binding composition comprises a nucleic acid probe or primer that specifically binds or hybridises to human or mouse IL-23p19 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 DEETTNDVPHIQCGDGCDPQGLRDNSQFCLQRIHQGLIFYEKLLGSDIFTGEPSLLPDSP 120

The present invention relates to a method of treating a human subject experiencing a physiological disorder. The method involves administering an agonist or antagonist of DNAX cytokine receptor subunit 5 (DCRS5, also Known as IL-23R) or of pl9, where the disorder comprises asthma or allergy, chronic obstructive pulmonary disorder (COPD) or an interstitial lung disorder. The invention is useful for treating interstitial lung disorder e.g. idiopathic pulmonary fibrosis, eosinophilic granuloma and hypersensitivity pneumonitis. The present sequence is the human pl9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a method of detecting (MI) a polynucleotide, by contacting a polynucleotide with a probe (PB) that hybridizes, under stringent wash conditions to at least 134 or 25 contiguous nucleotides of open reading frame of a fully defined interleukin (IL)-B30 sequence of duplex indicates presence of polynucleotide. The method is useful for detecting the expression of IL-B30 polynucleotide, and for detecting the expression of IL-B30 polynucleotide, and for detecting levels of IL-B30 polynucleotide, and for detecting levels of IL-B30 polynucleotide, and for detecting levels of IL-B30 in samples from patient suspected of having abnormal conditions such as inflammatory or autoimmune. The method is also useful in forensic science, e.g. to distinguish rodent from human or to distinguish between different cell exhibiting differential expression or modification different associated with abnormal expression or signaling by IL-B30. This sequence corresponds to the novel interleukin-B30 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DEETTNDVPHIQCGDGCDPQGLRDNSQFCLQRIHQGLIFYEKLLGSDIFTGEPSLLPDSP 120

AAA16618 to AAA16697 encode the human secreted proteins given in AAY94898 to AAA16697, isolated from human adult brain, adult thyroid, adult retina, foetal carcinoma, adult blood, adult neural, foetal kidney, adult placenta, adult testis, whole embryo, adult cartilage, kidney, foetal brain, adult thymus, foetal placenta, adult userus, adult tumour, and adult bladder, cDNA libraries. The polynucleotides and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliocating medical conditions in humans and animals. The polynucleotides can be used as markers for tissues in which the protein is preferentially expressed, as molecular weight markers on Southern gels, and as chromosome markers or tags to identify chromosomes
antibacterial; antifungal; cytostatic; antiinflammatory; dermatological; antidiabetic; antiasthmatic; antiarthritic; antirheumatic; protozoacide; antithyrold; immune deficiency; severe combined immunedeficiency; SCID; infection; HIV; hepatitis; malaria; autoimmune disorder; systemic lupus; connective tissue disease; multiple sclerosis; erythematosis; heumatoid arthritis; autoimmune pulmonary inflammation; asthma; duillain-Barre syndrome; autoimmune thyroiditis; myasthenia gravis; insulin dependent diabetes mellitus; graft-versus-host-disease; autoimmune inflammatory eye disease; allergy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New polynucleotides encoding secreted proteins, which may have e.g. nutritional, chemokine, immune stimulating or suppressing, hematopoiesis regulating, tissue growth, activin/inhibin antiinflammatory or tumor inhibition activity.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to recombinant polynucleotide encoding an antigenic interleukin-B30 (IL-B30). The polynucleotides are useful for detecting, isolating, or identifying a DNA clone encoding IL-B30 e.g. from a natural source, particularly for isolating a gene from mammal. The proteins are useful for generating antibodies and for screening drugs. The invention is also useful for diagnostic applications for IL-B30 mediated conditions such as inflammatory conditions and for cell differentiation. The invention is also useful in gene therapy. The present sequence is the human ILB-30 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 DEETTINDVPHIQCGDGCDPQGLRDNSQFCLQRIHQGLIFYEKLLGSDIFTGEPSLLPDSP 120

or to map gene positions. The proteins can be used in the treatment of immune deficiencies and disorders, such as severe combined immunedeficiency (SCID), as well as viral, bacterial, fungal and other infections. These infections include human immunodeficiency virus. (HIV), hepatitis, herpesviruses, mycobacteria, Leismania spp., malaria and candidiasis. The proteins can be used to treat autoimmune disorders such as connective tissue disease, multiple sclerosis, systemic lupus erythematosis, rheumatoid arkbritis, autoimmune pulmonary inflammation, diabetes mellitus, myasthenia gravis, graft-versus-host-disease and autoimmune inflammatory eye disease. The proteins can also be used to treat allergic conditions, such asthma. AAA16698 to AAA1674 represent probes for the human secreted proteins from the present invention

This sequence is the Interleukin-6 G-CSF related factor (SGRP) protein of the invention. The protein is a member of the IL-6/G-CSF/MSF family. The protein can be used in drugs for treating diseases due to abnormality of cell proliferation in the immune system and haematopoietic system
                                                                                                                                                                                                                                                  9

g à ANU12172-AAU12446 represent novel human secretory and transmembrane PRO polypeptides. The PRO polypeptides are useful to detect other PRO polypeptides, to alink bloactive molecules to calls expressing PRO polypeptides, to modulate biological activities of cells expressing PRO polypeptides, and to detect the presence of mammalian lung, colon, persent, rectal, cervical or liver tunours by comparing PRO polypeptide expression in a call sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TNP-alpha) from human blood, the proliferation or differentiation of chondrocytes, the proliferation of proliferation of inner ear utricular supporting cells or of T proliferation of inner ear utricular supporting cells or of the PRO prolypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or thinbit binding of A-peptide to factor VIIA. The PRO polypeptides can be used in assays to identify molecules involved in binding interactions. The polymetides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, transgenic or knock out animals and can be used in gene therapy Isolated , secretory and transmembrane PRO polypeptide used to detect other PRO polypeptides, link bloactive molecules to cells expressing PRO polypeptides, and detect the presence of mammalian tumors e.g. lung, breast, prostate, cervical. A; Note: the binding of pyridoxal 5'-phosphate to Lys-1708 competitively inhibits the bin C; Function: cHPD>

A; Description: as 3-hydroxypalmitcyl-[acyl-carrier-protein] debydratase (EC 4.2.1.61) ca
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              enzywe w

Pathway: fatty acid biosynthesis

C;Superfamily: rat fatty-acid synthase; 3-oxoacyl-[acyl-carrier-protein] synthase I home

C;Superfamily: rat fatty-acid synthase; 3-oxoacyl-[acyl-carrier-protein] synthase; a

C;Superfamily: abort-chiain alcohol dehydrogenase homology; dacyl-carrier-protein] S-

C;Reywords: acetylated amino end; acyl-transferase; alternative splicing; carbon-oxygen ]

P; oxidoreductase; phosphopantetheine; phosphoprotein; thiolester hydrolase

F;1-2512/Product: fatty-acid synthase; splice form 1 #status predict

F;1-2350, CFSFELFQ; 2351-2512/Product: fatty-acid synthase I homology <0ASH>

F;22-404/Domain: 3-oxoacyl-[acyl-carrier-protein] synthase I homology <0ASH>

F;32-1340/Region: caralytic (of 3-hydroxypalmitcyl-lacyl-carrier-protein] dehydratase)

Gloster S.E., Sandeman R.M., Strom A.D.G.;
"Cloning of a cDNA and gene encoding porcine granulocyte-colony
stimulating factor.";
Submitted (SEP-1997) to the EMBL/GenBank/DDBJ databases.
-! FUNCTION: Granulocyte/macrophage colony-stimulating factors are
cytokines that act in hematopoiesis by controlling the production,
differentiation, and function of 2 related white cell populations
of the blood, the granulocytes and the monocytes-macrophages. This
CSF induces granulocytes (By similarity).
-!- SUBGNIT: Monomer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3 LMALQLLLWHIALWMVPEAAPLSPASSLPQSFLLKCLEQVRKIQADGAELQERLCATHKL

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                               US-10-797-157-2
